FOREWORD

The EVOS PATENT DOORWAY ASSEMBLY has been described by a well known Architect as "One of the very few things which have been produced of any great advantage to housing work," and a perusal of the following pages will show that this description is fully borne out.

COSTS REDUCED BY 35 TO 45 PER CENT.

Briefly the idea behind the Assembly is to perform by mass production all those details in the erection of a Doorway which are at present done by laborious hand work, and to show the Builder a saving of 35 to 45 per cent. in labour and material by supplying Doors already "hung" to Frame, fitted with Locks together with Architraves already mitred, fitted ready for fixing. By this means 30 to 36 complete Doorways can be erected in a day, compared with existing methods, which permits only of 4 to 5 doors being "hung" in the same time. The saving to the builder in labour costs alone is obvious.

SIMPLICITY OF ERECTION.

On the frontispiece is a photograph taken at Grosvenor House, Park Lane, London, W., which shows in the clearest possible manner the exceedingly simple method of fixing the Assembly.

ADVANTAGES.

Some of the advantages the Assembly has to offer are :—

- (1) No waste of material or time involved in cutting timber to size.
- (2) Frames moulded and rebated on the solid with mitred joints clamped together by special patent steel angle plates.
- (3) Carpet Step provided.
- (4) Architraves mitred, cut to fit Doorway, already for fixing.
- (5) No planting on of Stops.
- (6) Doors already trimmed, shot, fitted and fixed.

- (7) No more taking down Doors to provide for carpet clearance.
- (8) Mortise already cut and lock fitted.
- (9) Striking plate fitted.
- (10) Keyhole bored and cut.
- (11) No damaged arrises to make good as Assembly, which, of course, includes door and frame, need not be inserted until plastering is finished.
- (12) No time expended in sharpening tools.
- (13) Painter has straightforward surface to work on. No surplus plaster to clean off frames.
- (14) No inconsidered loss on site of nails, screws, hinges, locks, waste timber, etc.
- (15) Time saved in ordering doors, frames and ironmongery from one source.
- (16) Time saved in having ironmongery, architraves, etc., delivered on job at the same time.
- (17) Storing and handling of material reduced to absolute minimum.
- (18) Definite accuracy in costing as opposed to *unavoidable uncertainty* in costing under existing methods.
- (19) Guaranteed accuracy in workmanship.
- (20) The complete Doorway fixed IN FIFTEEN TO TWENTY MINUTES.

The above list does not by any means represent all that the Assembly has to offer—the full value can only be appreciated after use.

INTERNAL ASSEMBLIES.

In the following pages are illustrations and particulars of a very comprehensive range of Assemblies designed to meet practically every requirement for Internal Doors of all descriptions, including usual Cupboards such as Larders, Coal Cellars, Linen Cupboards, where in the ordinary way frames would require to be erected and finished with architraves. Recess Cupboards provided for specially.

Evos Patent Doorway Assembly

Construction & Method of Erection

There is nothing intricate or complicated in the Erection of Evos Complete Doorway Assemblies, in fact Simplicity is the keynote throughout. In erecting the "Fixing Grounds" Builders proceed exactly as though they were erecting the ordinary type of frame, and all that remains to be done afterwards is to fix into these "Grounds" the frame and door which are supplied in due course as one combination.

In the following notes on Openings, Grounds, Frames, Hinges, Doors, Locks and Fixing, we have endeavoured to describe as concisely and as clearly as possible exactly what the Assembly is and how it should be erected.

OPENINGS.

BRICKWORK.

LARGER THAN USUAL.

Owing to the fact that "Fixing Grounds" are supplied in addition to the Frame proper, Brickwork openings must be made $4\frac{1}{2}$ " wider and 3" higher than the size of door to be used in order to accommodate these "Grounds."

Sectional details of Doorway Assemblies are shown on pages 12-13 and copies can be obtained on request.

BREEZE BLOCKS.

In the case of Breeze Block Partitions, "Fixing Grounds" are supplied prior to, or during the course of erection. These Grounds are rebated to receive breeze blocks.

FIXING GROUNDS.

BRICKWORK.

METHOD OF ERECTION.

In place of the Frames usually erected a Builder using Assemblies is supplied with "Fixing Grounds" which are erected in exactly the same way as ordinary Frames.

OBJECT.

The object of these "Grounds" is to supply a Groundwork or base into which in due course the Frame proper (complete with door hung ready for use) is fixed.

MATERIAL AND SIZES.

"Grounds" are supplied in 1" unwrought Deal $4\frac{7}{8}$ " wide for 4" Brick Walls and $5\frac{3}{8}$ " wide for $4\frac{1}{2}$ " Brick Walls, allowing for $\frac{7}{16}$ " plaster on each side.

BREEZE BLOCKS.

In the case of Breeze Block Partitions, Storey Fixing Grounds with Transomes are supplied.

REBATED GROUNDS.	These Grounds are rebated from 1½" to 3" to receive Breeze Blocks, and are supplied in 1½" Deal ¾" wider than the thickness of the Blocks, except that they are reduced in width above Transomes to allow for Plaster. These Grounds are made in thicker timber than Brickwork Grounds and when fixed to ceiling joists give additional strength to the wall.
MATERIAL & SIZES.	
THICKER TIMBER FOR INCREASED STRENGTH.	
CARE IN ERECTION.	In all cases it is important that particular care should be used in the erection of Fixing Grounds to ensure that they are fixed plumb and square.
FRAMES.	All Frames are of the same type whether for Brick Walls or Breeze Partitions.
MATERIAL & SIZES.	Frames are made in 1½" (1½" finish) Deal or Columbian Pine to the same width as the Grounds, wrought three sides, mitred and clamped together by Patent Steel Angle Plates of great strength. These Plates add greatly to the strength and rigidity of the Frame, and absolutely prevent any opening or straining at the joints.
MITRED AND REINFORCED JOINTS CANNOT OPEN.	
CARPET STEP.	Carpet Steps in ¾" Deal or Columbian Pine are also supplied fixed to the Frame, and these not only furnish further additional strength to the Frame in keeping it square while being handled on the Site, but obviate the necessity for extra work in unhooking and trimming the door to allow for carpet clearance. Steps can be disposed of if desired, by cutting away flush with joints after assembly is fixed.
ADDITIONAL STRENGTH.	
CARPET CLEARANCE PROVIDED FOR.	
REBATED DOOR STOPS.	All Frames are Moulded and Rebated on the solid as shown in section on p. 12-13. The Rebates are ½" by 1½", 1½" and 1¾", i.e., the actual thickness of doors nominally 1½", 1½" and 2" thick.
ARCHITRAVES.	Architraves are manufactured in Deal or Columbian Pine. The <i>finished</i> dimensions being 3" by ½" for No. 1 type and 3" by 1½" for No. 2 type. These two patterns are standardised as illustrated in sections on p. 12-13. For ordinary purposes and Housing Scheme work we recommend the plain Architraves, the Moulded Architrave necessitating a slightly increased cost. All Architraves are grooved at the back to allow for roughnesses where the plaster joins the Fixing Ground, and are supplied loose already cut to size and mitred.
MATERIAL & SIZES.	
PLAIN & MOULDED.	
GROOVED.	
SUPPLIED CUT AND MITRED.	

HINGES.	3" pressed steel Butts are used properly housed and fixed to door and frame.
DOORS.	Doors are supplied in a most comprehensive range of types and sizes as illustrated on pages 22-49.
RAILS AND STILES PREPARED.	The Top and Bottom Rails are "trimmed" and the stiles properly "shot," operations which will save a great deal of time and labour on the site.
PERFECT FITTING.	Each component part of the Assembly is made to a steel gauge and a perfect fit between Door and Frame is ensured.
SUPPLIED HUNG AND FITTED.	Doors are supplied already hung to the Frame with two Hinges, Mortised for, and Locks, etc., fitted. Key hole cut (in other words, a Complete Doorway). These items represent a saving of many hours' work on the site.
LOCKS AND FURNITURE.	5" Mortise or 3" Sash Mortise Locks of English Manufacture and dependable quality are provided together with three types of Bronze Metal Furniture. These are fitted as standard and are illustrated and described in detail on p. 74 of this catalogue.
FIXING.	"Grounds" are erected in exactly the same way as Frames are under existing methods. The essential point to bear in mind is to ensure that they are <i>fixed plumb</i> , and <i>square</i> .
CARE IN ERECTING GROUNDS.	
FIXING ASSEMBLY.	Fixing the Assembly is simplicity itself (see p. 17 Man fixing). On arrival the Door will be found locked to the Frame and in this condition it is inserted into the Ground. Small folding wedges are supplied and when packed out between Frame and Ground a perfect joint is obtained.
WEDGES FOR PACKING JOINTS.	
METHOD OF FIXING FRAME.	The door is unlocked and opened, and the Frame secured to the Ground through each jamb. The centre screw of each hinge is supplied separately, and being considerably longer than the other screws when screwed home, it goes right through the Frame into the Ground thus giving additional strength.
ADDITIONAL SECURITY.	
EASE AND RAPIDITY OF ERECTION.	Fixing the prepared Architraves completes the Doorway, and it will be found that a competent workman on his first attempt will be able to fix a complete Assembly in 20 minutes or less. If desired, Architraves can be fixed to one side of the Frame before it is inserted into the Fixing Ground.

Important

The adoption of Evos Assemblies means that openings have to be left larger than usual, viz., $4\frac{1}{2}$ " wider and $3\frac{1}{2}$ " higher than the size of door to be used. The decision to use Assemblies should therefore be arrived at while plans are being prepared, or at the latest, before Brickwork has actually started or joiner's contracts placed.

BRICKWORK OPENING TO BE 4 1/2" WIDER & 3" HIGHER THAN DOOR
OPENING MAY BE LEFT WIDER AND HIGHER IF DESIRED

VENEERED HARDWOOD DOORS

To meet the requirements of those who are interested in really luxurious doors, we maintain a special department for the manufacture of veneered doors in a pleasing variety of designs.

These doors are exceptionally well made and can be relied upon to give entire satisfaction. They are built up with a hardwood core, the laminations of which are tongued and grooved together with the grain running in opposite directions alternately. The joints are glued with a guaranteed heat and waterproof glue, and the built-up core is then subjected to our great pressure. The core is then cross-veneered and finish-face-veneered, thus giving a heavy, substantial and sound-proof door. The designs illustrated in the following pages have proved most popular and will be found to meet most requirements. Doors of these designs have been installed in many important buildings (we list recently, including The Privately Financed, Westminster Court, Devonshire Court, St. Mary Abbot's Church, Nelly Hospital, Manchester, Naxos Hotel, Highbury, Marlborough, London Jewish Hospital, etc.).

Flush Door veneered to form styles and rails with 2" inserted mitred crossbanding to form one panel. Supplied in Oak, Mahogany and Walnut.

Pattern No.

246.

$$(1\frac{3}{8}" \text{ finish}) \quad \begin{cases} 6' \ 8" \times 2' \ 8" \times 1\frac{1}{8}" \\ 6' \ 10" \times 2' \ 10" \times 1\frac{1}{8}" \end{cases}$$

$$(1\frac{3}{4}" \text{ finish}) \quad \begin{cases} 6' \ 8" \times 2' \ 8" \times 2" \\ 6' \ 10" \times 2' \ 10" \times 2" \end{cases}$$

Can also be supplied with Frame and Architraves in Hardwood to match Door.

Similar to Pattern No. 240, but with raised and moulded *unadorned* margins to form one panel and moulded pateras to *Form*. Supplied in Oak, Mahogany and Walnut.

Pattern No.

$$\begin{aligned} & \left(1\frac{1}{2}'' \text{ Rise}\right) \begin{cases} 6' 8'' & 2' 8'' = 1\frac{1}{2}'' \\ 6' 10'' & 2' 10'' = 1\frac{1}{2}'' \end{cases} \\ & \left(1\frac{1}{4}'' \text{ Rise}\right) \begin{cases} 6' 8'' & 2' 8'' = 2'' \\ 6' 10'' & 2' 10'' = 2'' \end{cases} \end{aligned}$$

Can also be supplied with Frame and Architraves in Hardwood or metal Doors.

EVOS DOORWAYS Limited.

Flush Door veneered to form styles and rails with raised and moulded panel, and sunk circular pateras on square bases. Supplied in Oak, Mahogany and Walnut.

Pattern No.

249

$$(1\frac{3}{8}" \text{ finish}) \begin{cases} 6' 8" \times 2' 8" \times 1\frac{1}{2}" \\ 6' 10" \times 2' 10" \times 1\frac{1}{2}" \end{cases}$$

$$(1\frac{1}{2}" \text{ finish}) \begin{cases} 6' 8" \times 2' 8" \times 2" \\ 6' 10" \times 2' 10" \times 2" \end{cases}$$

Can also be supplied with Frame and Architraves in Hardwood to match Door.

EVOS DOORWAYS Limited.

Flush Door veneered to form styles and rails with $1\frac{3}{4}$ " panel moulding, planted on to form two panels. Supplied in Oak, Mahogany and Walnut.

Pattern No.

226.

$$\begin{aligned}
 (1\frac{3}{8}" \text{ finish}) & \begin{cases} 6' \ 8" \times 2' \ 8" \times 1\frac{1}{2}" \\ 6' \ 10" \times 2' \ 10" \times 1\frac{1}{2}" \end{cases} \\
 (1\frac{3}{4}" \text{ finish}) & \begin{cases} 6' \ 8" \times 2' \ 8" \times 2" \\ 6' \ 10" \times 2' \ 10" \times 2" \end{cases}
 \end{aligned}$$

Can also be supplied with Frame and Architraves in Hardwood to match Door.

EVOS DOORWAYS Limited.

Flush Door similar to 226 type, but with $1\frac{3}{4}"$ panel moulding planted on to form three panels. Supplied in Oak, Mahogany and Walnut.

Pattern No

230.

$$\begin{aligned}
 (1\frac{3}{4}" \text{ finish}) & \begin{cases} 6' \ 8" \times 2' \ 8" \times 1\frac{1}{2}" \\ 6' \ 10" \times 2' \ 10" \times 1\frac{1}{2}" \end{cases} \\
 (1\frac{3}{8}" \text{ finish}) & \begin{cases} 6' \ 8" \times 2' \ 8" \times 2" \\ 6' \ 10" \times 2' \ 10" \times 2" \end{cases}
 \end{aligned}$$

Can also be supplied with Frame and Architraves in Hardwood to match Door.

EVOS DOORWAYS Limited.

Hospital All Flush Door veneered in Birch, Oak, Mahogany and Walnut.

Doors supplied separately or as complete Assembly.

Hospital Pattern No.

$$\begin{array}{l}
 \text{(1}\frac{3}{8}\text{" finish)} \quad \left\{ \begin{array}{l} 6' \ 8" \times 2' \ 8" \times 1\frac{1}{8}" \\ 6' \ 10" \times 2' \ 10" \times 1\frac{1}{2}" \end{array} \right. \\
 \text{(1}\frac{3}{4}\text{" finish)} \quad \left\{ \begin{array}{l} 6' \ 8" \times 2' \ 8" \times 2" \\ 6' \ 10" \times 2' \ 10" \times 2" \end{array} \right.
 \end{array}$$

Illustrations of other Hospital Doors can be obtained on request.
